Summary

Backend Engineer with **4+ years of experience** in building scalable distributed systems and high performance microservices in Node.js. Built a **bulk action controller** at Payoneer now adopted by **~75% of clients** as their preferred enterprise onboarding method. Drove **80 - 85% throughput improvement** via **Temporal** based async workflows and reduced API response times by **96%** through caching and async optimization. Skilled in **NestJS, GraphQL, Redis, Temporal, PostgreSQL** and microservice architecture.

Skills

Languages & Frameworks	JavaScript, TypeScript, Node.js, NestJS, Express, GraphQL
Databases & Caching	PostgreSQL, MySQL, MongoDB, Redis
Systems & Tools	Temporal.io, Kafka, Microservices, Docker, Git, TypeORM, SOLID Principles
CS Fundamentals	Data Structures & Algorithms, System Design, REST APIs

Work Experience

 Payoneer (Workforce Management Team)	Gurugram, India
<i>L4 Software Engineer</i>	<i>Jan 2025 - Present</i>
• Bulk Action System: Built a controller adopted by ~75% of clients as their preferred onboarding method. Parses Excel uploads, orchestrates downstream API calls per row using a sliding window technique for rate control and Redis for retry state management. • Temporal Workflow Engine: Integrated Temporal.io to orchestrate critical async processes with durable, fault-tolerant workflows, increasing system throughput by 80%. • Row Level Security (RLS): Implemented RLS enforcing strict tenant level data isolation at the database layer, eliminating application level access control gaps.	
 Skuad (Acquired by Payoneer)	Gurugram, India
<i>Software Engineer</i>	<i>Jul 2022 - Dec 2024</i>
• Contract Service Optimization: Re architected core business APIs reducing response times by 96% (25s → <1s) via Redis caching, async offloading, and a custom fail-safe retry mechanism. • Asset Management Service: Built a greenfield microservice from scratch using NestJS, GraphQL, TypeORM, and PostgreSQL, owning schema design, API contracts, and cross team rollout. • Webhook Emitter Service: Developed an outbound webhook system for real time event delivery to third party integrators, with retry logic, delivery tracking, and payload signing. • 3rd Party Integrations: Designed a database driven, config first API mapping system with a recursive transformation engine, eliminating code changes for new integrations and cutting integration turnaround time significantly.	
Oysters	
<i>Backend Intern</i>	<i>Oct 2020 - Nov 2020</i>
• Integrate and test backend APIs, ensuring correct end-to-end data flow. • Developed utility modules for JSON-to-Excel/CSV export and automated certificate generation using JavaScript libraries.	

Achievements

- **Customer First & Bug Bash Award, Skuad** — Recognised for delivering customer first solutions and identifying the highest number of bugs and security issues in an internal engineering competition.
- **Top 5 in HackGujarat Hackathon among 350+ teams** — Built *Code-Connect* in 32 hours. Developed real time video/audio chat with Collaborative Code Editor.
- **DSA Solutions Repository** — Maintained a repository of 450+ curated DSA problems with clean implementations and explanations. Achieved **800+ GitHub stars and 250+ forks** from the global developer community.

Education

Guru Tegh Bahadur Institute of Technology	2018 - 2022
<i>B.Tech, Computer Science Percentage: 83.5%</i>	
Maharaja Agrasen Model School	2018
<i>Class XII Percentage: 95%</i>	2016
<i>Class X CGPA: 10/10</i>
